

RAJESH C

Software Developer | Python | Java | REST APIs | Full-Stack

rajeshchandrapa999@gmail.com | +91 8904422972 | Bengaluru, Karnataka | linkedin.com/in/rajesh890

PROFESSIONAL SUMMARY

Motivated Software Developer with hands-on experience building scalable web applications, RESTful APIs, and data-driven systems using Python, Java, and JavaScript. Proficient in end-to-end application development — from design and backend logic to deployment. Strong foundation in OOP, database management, and agile development practices.

TECHNICAL SKILLS

ML / AI: Scikit-learn, NumPy, Pandas, Model Training & Evaluation, Classification, Regression

LLM & GenAI: RAG Architecture, Prompt Engineering, LLM Evaluation, Embedding Models, Vector Databases, Fine-tuning

AI Security: OWASP LLM Top 10, Adversarial ML, Data Poisoning Attack, AI Output Validation, Prompt Injection Attack

Programming: Python (Advanced), JavaScript, SQL (MySQL, SQLite), Java, C++

Frameworks: Django, Flask, REST APIs, HTML, CSS, PHP

EXPERIENCE

SecOps Intern (AI Security) — o9 Solutions, Bengaluru

Sep 2025 – Mar 2026

- Researched RAG poisoning on internal AI knowledge bases; gained deep expertise in RAG pipeline architecture, document ingestion, chunking, and retrieval.
- Evaluated internal LLM assistant for prompt injection and data exfiltration vectors; produced AI safety report with remediation recommendations.
- Conducted OWASP LLM Top 10 assessments: prompt injection, insecure output handling, model DoS, adversarial data poisoning, and supply chain vulnerabilities.

SecOps Intern (Red team) — o9 Solutions, Bengaluru

Mar 2025 – Sep 2025

- Bypassed Sophos EDR using a custom stealth reverse shell, exposing critical endpoint detection gaps across internal infrastructure.
- Built DLL injection malware payloads to simulate APT behavior; executed privilege escalation and lateral movement on Windows systems.
- Collaborated with engineers to analyze model inputs/outputs and document attack vectors relevant to AI pipeline integrity.

PROJECT

WebGuard AI — Real-Time Phishing Detection System | Python, Django, Scikit-learn

- Built an ML-powered URL classifier using automated feature extraction — domain age, WHOIS data, path entropy, redirect chains — for real-time phishing detection.
- Applied end-to-end ML pipeline: data preprocessing, feature selection, model training, evaluation (precision, recall, F1), and production deployment on Django.
- Implemented user authentication, detection history tracking, and an admin monitoring dashboard for centralized threat management.

CERTIFICATIONS

- Machine Learning with Python Developer Certification — freeCodeCamp (approx. 300 hours, Jan 2025)
- Python Programming — Hope Foundation (NumPy, Pandas, Scikit-learn, Flask)
- Central Government Bug Report — Discovered an OTP Bombing vulnerability on a Central Government of India portal (Nov 2024); officially acknowledged by the government.

EDUCATION

Master of Computer Applications (MCA)

CGPA: 8.3 | 2023–2025

CMR Institute of Technology, Bengaluru

Bachelor of Computer Applications (BCA)

83% | 2021–2023

Govt. First Grade College, KR Puram, Bengaluru
